Summarized Project Background, Business Need/Opportunities

SDG stands for *Sustainable Development Goals*. These goals are global and are valued all over the world. They are all interconnected and can be used as a framework to initiate transformation.

This project will allow students to collaborate with the director of Luther College's Nonprofit and Voluntary Sector Studies Network (NVSSN) and Data For Good-Saskatchewan (DFG-SK). It will also allow the public to see what needs to be tended to and where efforts can go to help.

The need of this project is to be able to map the SDGs and allow NorthStar and Carryover customers to identify what needs to be prioritized.

The opportunities this project will bring is a tool that can be used to collaborate with groups, investors, and businesses, and give information to the public of the situations at hand. This site will allow the user to be able to identify problems, areas of concern, and issues to prioritize as well as help make decisions and efforts easier to implement.

North Star (Target) Customer
- Decision Makers (Government)
- NVSSN
- DFG-SK

Carryover Customers
- General Public
- Businesses
- Outer Residents
- Engineers
- Researchers
- Donors
- Investors

Project Assumptions
- WordPress
- StoriesOnBoard to create USM (User Story Maps)
- MyPeg
- GitHub
- Create to show data and giving information to users

- Data will show what areas should be more concentrated on and what the main source/issue is

Project Constraints:
- WordPress to build the Website
- GitHub
- Time: 1-2 months
- Bugs, Defects, Glitches
